To Nathalie Girardot

**SUBJECT**

Standardisation Request; Burglar  
resistance. Dutch position

**DATE**

20-12-2019

Dear Mrs Girardot,

You invited (as per document CEN/TC 33 N 3845) us to give our statement on the following:

“to make known its position on the "Burglar resistance" characteristic. Should it remain voluntary or do you want it to be included in the standardization request for this characteristic to be harmonized?”

The chairs and experts of my committees on Doors & windows, and on Burglary resistance, have come to the following position:

*De Dutch position is that burglary resistance should not be included in the SReq. Inclusion in EN 14351-1 and EN 14351-2 is not of relevance; the Dutch trade organisations will (as they have in the past) refer to the current Dutch regulations (the Dutch Building Decree), which refers to the national standard NEN 5096.*

We hope this formulation meets your needs; please let me know should you need more details.

With kind regards,

Carolien Hoogland,

Secretary to the Dutch committees on Doors & windows, and Burglary resistance
